NCI CGAP Mare ere pooled and a single-stranded DNA preparation of the resulting mixture was used as a tracer in a subtractive hybridization with a driver whose composition is detailed below:

NCI CGAP Kid3 pool 1 LLAM 334-337, 3682-3683,
3796-3903 (IMAGE CloneIDS 1323911, 1456008-1456775,
1500552-1502855); NCI CGAP Kid5 pool 1 LLAM 3338-3342,
3722-3725, 3776-3778 (IMAGE CloneIDS 1323912-1325831,
1471368-1472993, 1492104-1493255); NCI CGAP Lus pool 1 LLAM 3575-3582, 3851-3854 (IMAGE CloneIDS 127096-1477991,
152094-1522439); NCI CGAP GC4 pool 1 LLAM 3164-3167,
3716-3720, 3733-3735 (IMAGE CloneIDS 127096-128631,
1469064-1470983, 1475592-1476743); NCI CGAP Pr22 pool 1 LLAM 2457-2459, 2758-2759, 3062-3068 (IMAGE CloneIDS 18706-18706,
3716-3720, 3733-3735 (IMAGE CloneIDS 127096-128631,
11AM 2457-2459, 2758-2759, 3062-3068 (IMAGE CloneIDS 6, 791-2806,
NCI CGAP CO10 pool 1 LLAM 2644-2653, 2811-2872 (IMAGE CloneIDS 1057096-12863),
NCI CGAP CO10 pool 1 LLAM 2644-2653, 2811-2872 (IMAGE CloneIDS 1057096-1806),
NCI CGAP CO10 pool 1 LLAM 2644-145351); Subtraction was performed as previously described (Bonaldo, Lennon & Soares (1996): Normalization and Subtraction: Two
Approaches To Facilitate Gene Discovery. Genome Research 6, 731-806.

/note="Organ: lung; Vector: pT713b-Pac (Pharmacia) with a modified polylinker; lst strand cDNA was prepared from pooled lung tumor tissue, and was then primed with a Not orgoidT) primer. Double-stranded cDNA was ligated to coligo(dT) primer. Double-stranded cDNA was ligated to cloned into the Not I and Eco RI sites of the modified pT713 vector. Library went through one round of normalization. Library constructed by Bento Soares and M.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Indea—"Organ: lung, Vector: pT7T3D-Pac (Pharmacia) with a modified polylinker; Plasmid DNA from the normalized library NCI CGAP LuS was prepared, and ss circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from a pool of 5,000 clones made from the same library (cloneIDs 11414920-1417991 and 1520904-1522439). Subtraction by Bento
